Description of App

Spend Smarties (\$\$) is a budgeting app that helps users calculate income, track expenses, and set financial goals. It's designed for college students, parents, and entrepreneurs who want better control of their money.

The app solves everyday money management and financial decision-making problems through smart AI insights.

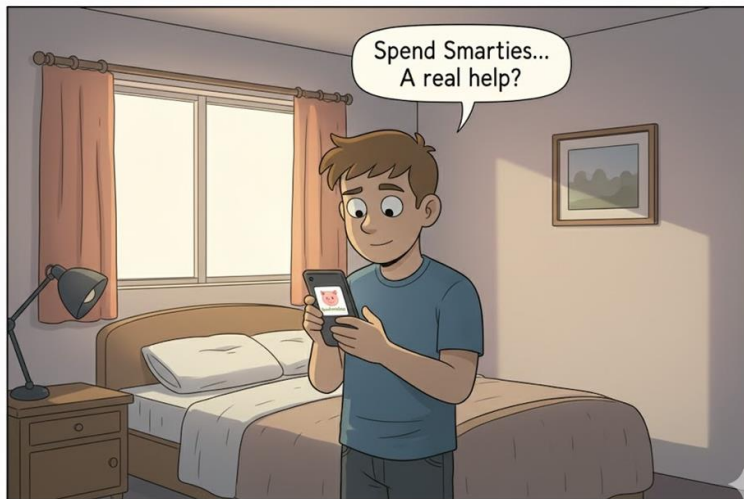

The app follows a subscription model:

Smart (Free): Basic budgeting tools.

Wise (Advanced): AI goal planning + secure bank link via Plaid.

Genius (Expert): Full AI assistant + personal financial advisor access.

Story Boards

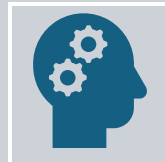

Creating the App

First we came up with the idea about which app we wanted.

Then we designed the layout of the app in Canva according to our initial idea about it being simple.

After that we prompted the idea into Gemini to create us an demo app using HTML.

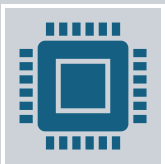

Design for Belonging

We designed the app for anyone to use by creating a secure app that can handle the average person's sensitive financial information.

The app is designed to be a seamless interface that highlights easy usability to make even the least financially aware person feel like a financial guru.

If users are still looking for assistance, we offer an upgraded package that gives the user the ability to utilize AI or a personal financial expert to assist with their budgeting needs and financial goals.
